SUMMARY

Graduated with a Bachelor's degree in Information Technology from LJ University (January 2026) with hands-on experience working with startups and small businesses. Experienced in developing internal systems, workflow automation pipelines, and web applications to improve operational efficiency.

Built internal task management infrastructure, data processing workflows using Orange Data Mining and KNIME, and multiple production websites. Strong interest in AI/ML, intelligent automation, and data-driven systems, actively exploring how artificial intelligence can be integrated into practical applications and business workflows.

EXPERIENCE

Shievon.in (formerly Schonity), Developer

11/2024 – 12/2025 | Ahmedabad

- Designed and developed SuperiorView, an internal task and workflow management system to streamline assignment tracking, document management, and team coordination.
- Built data processing and analytical workflows using Orange Data Mining and KNIME, enabling structured analysis of datasets and improving the efficiency of research and reporting pipelines.
- Developed and maintained websites including shievon.in, schonity.in, and prasiddhaminterior.com.
- Produced technical documentation, research summaries, and structured analytical reports.
- Contributed to early product and infrastructure discussions related to the startup initiative Schonity, later renamed Shievon.

Drishtikon.Design, Freelance Technology Consultant

02/2026 – 04/2026 | Ahmedabad

- Developing and maintaining the company website to improve digital presence, project showcasing, and online client acquisition.
- Researching and introducing AI-assisted creative workflows to support rendering and visualization processes, evaluating tools that can enhance productivity and streamline design pipelines.
- Exploring and recommending automation and workflow improvements that support collaboration between designers, project stakeholders, and execution teams.
- Assisting with technical aspects of digital outreach, including improving the studio's online presence and supporting early international collaboration opportunities.

EDUCATION

Bachelor of Engineering, Information Technology,

11/2022 – 01/2026

L.J. Institute of Engineering and Technology

- Studied core computer science subjects including Web Development, React, Python programming, Theory of Computation, Compiler Design, and Digital Electronics.
- Completed coursework involving modern web technologies, programming paradigms, and system-level computing concepts.
- Developed practical experience in software development, backend systems, and web-based application design through academic projects and independent exploration.

Diploma, Computer Engineering, Government Polytechnic

08/2019 – 08/2022

- Built strong foundational knowledge in C, C++, Java, Digital Electronics, Electronic Circuits, Operating Systems, and Database fundamentals.
- Studied basic data structures, mobile application development, and software project management concepts as part of the curriculum.
- Gained early exposure to programming logic, system fundamentals, and software development practices through academic coursework and hands-on exercises.

SKILLS

Languages: Python, JavaScript, C/C++, Java

Backend & Frameworks: Node.js, Express.js, Django

Web Development: Astro, , EJS, HTML, CSS, Bootstrap

Data & Workflow Tools: Orange Data Mining, KNIME

Libraries: SDL, SFML

Tools & Platforms: Git, Hostinger, Heroku

PERSONAL PROJECTS

Chess Variant (Concept Project)

- Collaborated with peers and an investor to conceptualize a strategic chess variant project.
- Led early discussions and planning phases, gaining experience in project planning and development lifecycle understanding.

shyamraval.github.io

- Developing a personal website and experimentation platform used to showcase projects, document technical explorations, and publish writings on technology, systems, and broader intellectual interests.

Development Experiments

- Explored game development concepts using C/C++ with SDL and SFML libraries, building small experimental prototypes to understand rendering loops, input systems, and basic game mechanics.
